TITLE : Corner Volumes

YEAR : 2007

EXHIBITION : New Works, solo show, Kirkhoff, Copenhagen, DK

MEASURES : 68 x 68 x 68 cm

MATERIALER : 3 mm translucent acrylic, white silicone

Corner Volumes is a site specific work consisting of two equal-sided triangles made from translucent acrylics. The triangles are respectively fixed to a top and bottom corner in the exhibition space.

The translucent acrylic refracts the light that naturally shines through it, throws it into the inner space that is defined by the acrylic as diffuse light. Not being able to see the inner space of the sealed corner, the viewer perceives a reflection of its volume in the acrylic in the form of a two dimensional, vibrant, monochrome spatial surface.
